DUTCH, SPANISH, & ENGLISH
These Hardy Iris must be planted in the Fall

Iris will give your garden a maze of sparkling splendor—and is the garden really complete without these dainty touches of color?

These Iris differ from the Bearded and Japanese by producing bulbs instead of rhizomes. These must be planted in the fall, the earlier the better and they have proved quite hardy. Where winters are very severe they should be covered deeply with straw, hay, or leaves. Excepting the English Iris they form foliage in the fall with the leaves persisting throughout the winter. Late Autumn is

SHRUB PLANTING TIME

Give your home an atmosphere of cozy charm with a few well chosen shrubs. A few dollars spent for some of the rarer shrubs will add an air of serenity and restfulness that will give distinction to your home grounds. Late autumn is the ideal time to plant shrubs. They usually can be dug after the middle of October and where frost enters the ground previous to that time a few burlap bags, hay, straw, or manure will keep the soil workable until the plants arrive.

As growth varies according to conditions we give the approximate height as follows:

- D = Dwarf (less than 4 feet tall)
- M = Medium (4 to 8 feet tall)
- T = Tall (8 feet and more)

**Plant American**

The war has given Americans a chance to re-value their own potentialities. Those who can travel will be choosing to see this country. Those who garden will be learning a new appreciation of the vast quantities of plant material available here.

Many of the bulbs which hitherto came to us from Holland and France will not cross the water, nor is it possible to depend on English-grown bulbs for Autumn planting. Tulips especially will be either missing from the lists or be purchased in only limited quantities. We cannot hope to substitute plants and bulbs that rival the tulip’s beauty, in its various ranges from the earliest species to the latest noble Darwin, but we can turn to dwarf, hardy, and well-grown Early autumn is a favorite time with many gardeners to sow perennial flower seeds. To hasten them along a cold frame or a similar temporary structure should be used. Those marked + give best results if the seed is sown late in the fall. They need the action of frost to sprout freely during the coming spring.

To help our customers in selecting varieties for the rock garden we have used the symbol △ to identify them at a glance. These varieties also are splendid for dwarf beds, borders, or for edgings. Plants suited to semi-shade are marked ♦, and those that will grow in deeper shade ◆. Practically all of these also do well in a sunny position.

Delphinium

Fresh, 1940 Crop Seed, for Autumn Sowing

Dreer’s Giant Pacific Hybrids

This is a sensational new strain of hybrid Delphinium proclaimed the showiest and most glorious of all Delphiniums. Under favorable conditions the plants will reach truly gigantic heights yet every flower spike is well formed. Has wiry slender stems and a large percentage of the plants have proved decidedly resistant to mildew. Rarely a single, nicely formed bees, fine foliage, and unusual uniformity of habit combine to make this the most desirable of all hardy Larkspur.

1939-1940 Novelties

2161 Galahad. A giant in every respect with magnificent pure white blooms averaging 3 inches in diameter. Well-spaced flowers on strong thin stems. Mildew resistant.

2162 Blue Jay. This new variety includes some strikingly clear and pure tones of blue ranging from medium to dark blue with contrasting dark bees.

2164 Black Knight. This sensational new variety is by far the darkest violet yet produced. It is a rich impressive color with a lovely glistening sheen.
